Precision growth program benefits

Calf Precision, a 24/18 milk replacer, is designed to capitalize on the rapid early growth potential of calves while allowing a seamless transition to consuming calf starter. Calf Precision is designed to feed well in both conventional calf feeding systems and automated systems. Key benefits include:

- Increased average daily gain prior to weaning
- Adequate starter intake prior to weaning, allowing for a good transition off milk replacer
- Improved immune function
- Improved health of pre-weaned and weaned calves

Selected ingredients for calf performance

- **Elevated protein:** The elevated-protein, low-fat formula takes advantage of the calf's early growth potential.
- **Amino acid-balanced:** Amino acid balancing improves growth and feed efficiency by increasing protein utilization to support frame growth. Calf Precision is formulated to contain lysine and methionine at concentrations recommended by the latest research.
- **Plasma protection:** Plasma protein enhances calf performance and provides immunological support during times of stress, particularly important for raisers using automatic calf feeders because commingled calves face a greater immune challenge.
- **Bio-Mos®:** Bio-Mos has been shown to stimulate antibody production and enhance intestinal structure and function.
- **Organic trace minerals:** Organic trace minerals (Mn, Zn, Fe, Cu and Se) have greater availability to the calf versus inorganic forms and have been shown to promote growth in calves fed an intensified plane of nutrition.
- **pH modifiers:** Lower pH limits proliferation of pathogenic bacteria in the gut, improving health and digestion.
- **Amino acid balanced:** Provides more methionine to promote growth and decrease inflammation.

Other key features

- **Insta-mix manufacturing:** The insta-mix manufacturing process assures rapid uniform mixing with ingredients staying in suspension.
- **Gel coat technology:** The unique gel coat technology helps to coat and soothe the intestinal lining during times of stress.
