VISION

Fast start with Vision 22/22 milk replacer

Vision is a 22/22 plasma calf milk replacer formulated to maximize both health and performance by providing a balance of nutrients and additives to get calves off to a fast start. Vision provides calves with 10-percent greater protein and energy than conventional 20/20 milk replacers.

Vision's additives are backed by university trials, and proven through field research, to provide nutrition and immune support that's beneficial for calves fed in conventional or automated calf feeding systems.

Selected ingredients for calf performance

- **Balanced protein and energy:** Promote increased growth with 10-percent greater protein and energy density than 20/20 milk replacer
- **Protein and amino acids:** Balanced to meet the growing calf's protein needs with all-milk protein as well as functional serum proteins and amino acids (lysine and methionine)
- **Medium chain fatty acids:** Support digestion and intestinal function
- **Trace minerals:** Amino acid trace mineral complexes (zinc, copper, manganese, selenium and iron) needed for numerous functions, including immunity, skin and hoof integrity, growth and muscle development, and energy metabolism
- **B-vitamins:** Stimulate appetite and support metabolism
- **Vitamin C:** Powerful antioxidant
- **MOS (yeast cell wall):** Binds pathogens and stimulates immune function
