VP KID

Opportunities with 24/25 milk replacer

VP Kid is designed to rival performance achieved when kids are fed whole milk. VP Kid provides protein, energy and intestinal health benefits to get kids off to a fast start. VP Kid supplies an optimal nutrient profile and additives, resulting in exceptional growth in a variety of situations, including conventional feeding, automated feeders, and thermal stress situations.

Selected ingredients for performance

- **High protein:** Greater amount of all-milk protein supports increased structural growth
- **High fat:** Greater energy density to maintain positive energy balance during thermal stress
- **Medium chain fat from coconut oil:** Similar fatty acid profile to butter; highly palatable and aromatic; readily digestible and a quick source of energy for kids
- **MOS (yeast cell wall):** Binds pathogens and stimulates immune function
- **Organic trace minerals:** Support immune function, skin and hoof integrity, growth and muscle development, and energy metabolism
- **Dextrose:** Lowers osmolality and lactose levels, resulting in easier digestibility while providing a rapidly available energy source
- **Deccox®:** Aids in controlling coccidia parasitic infection
