# BSF texturized calf starter

BSF delivers balanced starch and fiber for improved calf performance and greater overall gut function.

## Balanced approach offers several benefits

- Excellent palatability with early and elevated starter grain intake
- Increased gastrointestinal tract maturation
- Improved fecal consistency
- Prolonged shelf life and freshness
- Optimal molasses formula to promote easy handling and reduce winter freezing

## Selected ingredients for calf performance

**Calf protein pellets:** Palatable blend of soybean meal with excellent pellet durability; delivers organic selenium and trace minerals

**Kibbled corn:** Using the most thorough physical corn processing technology available, whole corn is cooked with heat and pressure, gelatinizing the starch and resulting in a highly digestible source of corn starch

**Whole corn:** Highly palatable source of starch with minimal fines and optimal shelf life

**Cottonseed hull pellets:** Balances starch fermentation as a source of effective fiber, increases the digestibility of other starter ingredients, and increases rumen and intestinal function

**Vita-Soy®:** Optimally roasted split soybeans provide bypass protein and fat in a highly palatable and consistent feed
