CALF TRANSITION BOOSTER PELLET

Calf Transition Booster Pellet promotes gut integrity and function by supporting intestinal microbial balance as well as immune system function during stress events, such as weaning, grouping, diet changes, and environmental challenges.

Easy-to-feed topdress pellet

- The highly palatable pellet is fed at a low-inclusion rate of 2 ounces per head daily topdressed on calf starter, calf grower or heifer TMR.
- Topdress dry feed with Calf Transition Booster Pellet during periods of stress.
- In most situations, feeding Calf Transition Booster Pellet along with best management practices increases consistency of feed intake, increases calf growth, and results in firmer and more consistent manure.

Selected ingredients to protect and support gut function

Bacillus subtilis

Inhibits *Clostridium perfringens*, *Salmonella* spp. and *E. coli*

Trace minerals

Zn, Mn, Cu, Co, and Se support growth and muscle development, energy metabolism, and immune function

Hydrolyzed yeast cell wall (MOS)

Binds pathogens and stimulates immune function

Enhanced vitamin nutrition

Vitamins A, D, E, and B vitamins stimulate feed intake and growth

*Dime included in photo
for reference of pellet size*
