Bag capacity*

Bag size, ft	Tons (fresh) per linear foot
8	1
9	1.25
10	1.5
11	1.75
12	2.25
14	2.75

*Estimates shown are for corn silage.

Ratio for bag chart

Type of crop, moisture	Relation to 65% corn silage tonnage
Haylage, 60%	100%
HMSC, 30%	130%
Earlage, 35%	120%
Snaplage, 40%	130%

Estimated as-fed capacity for bunkers and piles

Enter avg width*	1. _____	ft
Enter avg length	2. _____	ft
Enter avg height	3. _____	ft
Multiply 1x2x3	4. _____	lb/ft ³ in structure
Est as-fed density**	5. _____	lb/ft ³
Multiply 4x5	6. _____	lb as-fed in structure
Divide by 2,000	7. _____	tons as-fed in structure

*To determine dimensions for piles, look at the slopes of each side of the pile. Visualize how much of the slope would need to be "folded back" on itself to square up the sides of the pile to determine average width.

**Use known as-fed density when possible. Otherwise, start with these average densities: 40 lb for haylage and corn silage; 60 lb for HMSC; and 45 lb for earlage/snaplage. Use higher or lower numbers for well packed or poorly packed units, respectively.

CROP-N-RICH[®] NEXUS

Easy-to-use dual-purpose
silage inoculant for greater
dry matter recovery and
reduced spoilage and heating
in a broad range of forages

Contains
Lactobacillus plantarum MTD/1[®]
and *Lactobacillus buchneri* PJB/1

Service & technology to get
the most from your forage

REV 1023

CROP-N-RICH® NEXUS

Dual-purpose silage inoculant with *L. plantarum* MTD/1® and *L. buchneri* PJB/1 bacteria improves dry matter (DM) recovery and reduces spoilage and heating

Proven effective

Research shows:

- Improved upfront fermentation and DM recovery
- Less protein degradation and ammonia production
- Less spoilage, longer bunklife and less wasted feed
- Improved palatability

Effective dual-purpose bacterial inoculant:

1. ***L. plantarum* MTD/1** is the most research-proven silage inoculant bacteria that produces lactic acid to quickly lower the silage pH and reduce DM loss.
 - Crop-N-Rich Nexus supplies 100,000 colony forming units (CFU) of *L. plantarum* MTD/1 per gram of forage.
2. Acetic acid is a powerful fungicide that reduces yeast growth and subsequent mold, spoilage, and heating. ***L. buchneri* PJB/1** works by producing higher levels of acetic acid in the silage.
 - Crop-N-Rich Nexus supplies 200,000 CFU of *L. buchneri* PJB/1 per gram of forage.

Unmatched ease of use

- Water-soluble prills easily mix into solution in less than 45 seconds

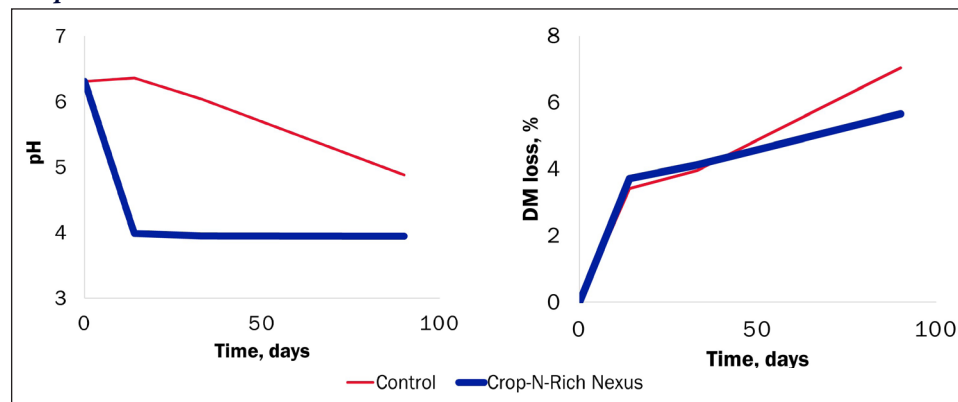

Use when:

- Forages are fed during warm weather, feedout rates are a challenge, high-starch feeds are stored, feeds may be moved after storage, TMRs tend to heat in the feedbunk, or crops have been compromised by rain, hail, insects, drought, or disease
- Baleage or haylage is stored with greater than 35% DM and corn silage is stored with greater than 32% DM
- Feedout will begin after at least 45 days in storage to maximize aerobic stability benefits

Product options:

- **Crop-N-Rich Nexus 100:** Treats 100 tons (as-is) of forage
- **Crop-N-Rich Nexus 500:** Treats 500 tons (as-is) of forage

Lower pH and improved DM recovery in grass (42% DM) treated with Crop-N-Rich Nexus.

Source: Internal trial data.

Fewer yeasts and improved aerobic stability in corn silage (32% DM) treated with Crop-N-Rich Nexus at 30 and 90 days post-ensiling.

Source: University of Delaware, 2014.

Average of 32 trials with corn silage, wheatlage, alfalfa, and earlage harvested at DM ranging from 28% to 62% and treated with Crop-N-Rich Nexus.

	Control	Crop-N-Rich Nexus
Acetic acid, %	1.42	2.04
Yeasts, CFU/g	39,346,562	149,234
Aerobic stability, hours	104	236
