LIBERATOR

Liberator is a whole milk and milk replacer additive that delivers potent prebiotics and probiotics to support intestinal microbial balance and promote gut integrity and function during periods of stress.

Easy-to-use gut protection strategy

- Liberator is a great fit for stressed or challenged calves, during seasonal changes, or when backgrounding calves before moving them to a group pen and autfeeder.
- In a 100-calf field study, supplementing calves with Liberator decreased antibiotic treatment rate, decreased incidence of severe scours, and increased weight gain during the first 14 days of age.
- Add one level scoop (10 grams) of Liberator per calf to whole milk or milk replacer twice daily for 7 to 10 days.
- Liberator is sold in cases of six 1.6-lb individual packets. Each packet contains enough Liberator to dose five calves for seven days.

Selected ingredients to protect and support gut function

Hydrolyzed yeast cell wall (MOS)

Binds pathogens and stimulates immune function

Beta-glucans from live yeast

Binds pathogens, including *Cryptosporidium parvum* and *E. coli*, and primes the immune system

Bacillus subtilis

Inhibits *Clostridium perfringens*, *Salmonella* spp. and *E. coli*; strains included in Liberator are compatible with ionophores and neomycin-oxytetracycline

B vitamins

Stimulate metabolism and appetite

Vitamins C

Antioxidant
