TALON 25/25 MILK REPLACER

Talon 25/25 milk replacer rivals performance achieved when feeding calves whole milk. Talon provides protein, energy and intestinal support benefits to give calves a fast start.

Nutrition to fuel growth and support immune function

- High levels of protein and fat support growth rates under normal and thermal stress conditions.
- Calves in autfeeder barns have elevated maintenance energy requirements and benefit from greater energy availability to reach growth targets.
- The fat in the diet spares glucose, allowing more glucose to support immune function.
- Increased caloric density benefits calves consuming small milk meals.
- The low-osmolality formula supports intestinal barrier function to protect against leaky gut.

Selected ingredients for calf performance

High protein content: Supports increased structural growth with a blend of milk proteins from whey and skim milk sources

Plasma: Improves performance under immune challenge

Balanced supplemental amino acids
Lysine and methionine promote efficient growth and decreased inflammation

High fat: Greater energy density to maintain positive energy balance

Medium-chain fatty acids: Derived from coconut oil to promote high palatability and aroma; provides antimicrobial properties and a quick source of energy

Organic trace minerals: Se, Cu, Zn, Co, Fe, and Mn support growth and muscle development, energy metabolism, and immune function

Enhanced vitamin nutrition: Vitamins A, D, E, and B vitamins stimulate feed intake and growth

Yeast cell wall (MOS): Binds pathogens and stimulates immune function

Direct-fed microbials: *Bacillus subtilis* and *Enterococcus faecium* promote intestinal microbial balance through inhibition of pathogenic bacteria and reduction of local inflammation; *Talon is available with or without DFM*

Available with:

Bovatec®
Bovatec/ClariFly®
Non-medicated
DFM
