Feed, nutrition and management expertise

VITA PLUS DAIRY GOAT PROGRAM

The Vita Plus Dairy Goat Program delivers quality feed and nutrition to dairy goats in all stages of growth and production.

VP Kid is a 24/25 kid milk replacer specially formulated to rival performance achieved when kids are fed whole milk. VP Kid provides an optimal nutrient profile and additives to support intestinal function and fuel exceptional growth in a variety of situations, including conventional feeding, automated feeders, and periods of thermal stress. VP Kid's excellent mixability makes it convenient and easy to use.

18% Goat Starter Pellet is a highly palatable micro-pellet, which is ideal for young goat kids to promote early starter intake and support gut development. 18% Goat Starter delivers optimum levels and sources of protein as well as high levels of essential minerals and vitamins. *Available with Rumensin®.*

16% Grower Pellet is a complete pellet formulated for ideal growth and development of dairy goat yearlings. The easy-to-feed and palatable pellet promotes consumption, reduces ingredient separation, and provides uniform consumption of nutrients.

Lactating Dairy Goat Pellet is formulated to maximize production and provide lactating dairy goats with optimal nutrition. The easy-to-feed and palatable pellet promotes consumption, reduces ingredient separation, and provides uniform consumption of nutrients. *Available with 16% and 18% protein.*

Dairy Goat Concentrate pelleted protein supplements provide flexibility in creating a custom ration to meet the unique demands of your dairy goat herd. This pellet contains necessary vitamins and minerals to optimize performance. *Available with 26%, 32% and 36% protein.*

Dry Doe Feed is a complete pellet formulated to meet the nutrient requirements for healthy dry does. Dry Doe Feed contains ammonium chloride; on-farm evidence suggests that ammonium chloride might help reduce the incidence of pregnancy toxemia. Dry Doe Feed provides a 2:1 calcium-to-phosphorus ratio.

Goat Mineral is a non-medicated, free-choice mineral formulated specifically for goats and may be used to supplement the diets of goats of any age.

Custom mixes: In addition to our standard products, Vita Plus can produce custom formulated pellets to meet each farm's unique situation. *A 2-ton minimum is required for custom pellets.*
