# VITALYTE PLUS

## Preventing dehydration

Dehydration and loss of electrolytes can quickly result in negative consequences for calf health. Water makes up approximately 75% of the total bodyweight of a baby calf. A scouring calf can lose 5% to 10% of that bodyweight in a single day. In most cases, the death of a scouring calf is actually caused by dehydration and/or electrolyte loss, not from the infectious agents that triggered the scours.

VitaLyte Plus aids in restoring essential electrolytes, energy and vitamins in scouring calves. Gel coat technology helps coat and soothe the intestinal lining during times of stress. When mixed with warm water, VitaLyte Plus is a sweet-tasting, highly palatable solution that provides fluids and energy to the calf.

## Replace fluids and electrolytes with VitaLyte Plus

|       | Shipped calves  | Mild dehydration   | Severe dehydration   |
|-------|---|--|--|
| Day 1 | Feed 1½ quarts of VitaLyte Plus solution and no milk/milk replacer. Repeat every 6 hours after arrival.                     | Continue feeding milk/milk replacer at normal levels. Feed 1½ quarts of VitaLyte Plus solution twice daily between feedings. | Continue feeding milk/milk replacer at normal levels. Feed 1½ quarts of VitaLyte Plus solution twice daily between feedings. |
| Day 2 | Resume feeding milk/milk replacer at normal levels. Feed 1½ quarts of VitaLyte Plus solution twice daily between feedings.  | Continue feeding milk/milk replacer at normal levels. Feed 1½ quart of VitaLyte Plus solution once daily between feedings.   | Continue feeding milk/milk replacer at normal levels. Feed 1½ quarts of VitaLyte Plus solution twice daily between feedings. |
| Day 3 | Continue feeding milk/milk replacer at normal levels. Feed 1½ quarts of VitaLyte Plus solution once daily between feedings. | Continue feeding milk/milk replacer at normal levels. Feed 1½ quarts of VitaLyte Plus solution once daily between feedings.  | Continue feeding milk/milk replacer at normal levels. Feed 1½ quarts of VitaLyte Plus solution once daily between feedings.  |
