CALF STARTERS

Nutritionally balanced for optimum growth and health

Calf starter intake is crucial for economic raising of preweaned calves and allows for a smoother transition at weaning. Vita Plus calf starters use only the highest-quality ingredients to ensure good palatability, minimum fines and maximum intake.

BSF | Balanced for starch and fiber, BSF increases fecal consistency and gastrointestinal tract maturity. A combination of calf protein pellets, kibbled corn, whole corn, cottonseed hull pellets, and Vita-Soy® provides an optimal balance of protein, energy, and essential nutrients for calf health and growth.

18% GoldenGlo Calf Starter | GoldenGlo is a texturized calf starter specially designed for optimum health and growth of preweaned calves. It is formulated with Vita Soy and steam-flaked corn to increase the energy level and digestibility.

- High levels of minerals and vitamins contribute to healthy growth.
- Vita-Soy consists of full-fat soybeans that are cleaned, flame-roasted, steeped, and rolled. The coarse, free-flowing texture and pleasant nutty aroma make Vita-Soy the ideal bypass protein and fat supplement.
- Steam-flaked corn is highly digestible throughout the digestive tract and results in improved intakes and weight gains in young calves.
- High-quality, clean, heavy oats are an excellent source of digestible fiber and are highly palatable to ensure minimum fines.
- Organic selenium provides antioxidant protection, improves immune response and promotes growth and muscle development.

18% and 16% One-Shot Pellet | One-Shot provides high levels of essential minerals and vitamins for healthy growth, optimum levels and sources of protein and energy, and digestible fiber sources to encourage dry feed intake.

- **18% One-Shot:** Formulated for calves up to 200 pounds in bodyweight
- **16% One-Shot:** Formulated for calves up to 300 pounds in bodyweight

38% Calf Concentrate | 38% Calf Concentrate is a low-inclusion rate pellet used to manufacture complete texturized calf feed or topdress with on-farm grains.

- Nutritionally balanced for optimum growth of young calves
- Organic selenium for increased bioavailability
