VISION 22/22 MILK REPLACER

Vision 22/22 milk replacer provides protein, energy and intestinal support benefits to give calves a fast start.

Nutrition to fuel growth and support immune function

- Vision provides calves with 10% more protein and energy than conventional 20/20 milk replacers to promote increased, balanced growth.
- Vision supports growth rates under normal and thermal stress conditions as well as in autfeeder barns.
- The low-osmolality formula supports intestinal barrier function to protect against leaky gut.

Selected ingredients for calf performance

Protein: Supports increased structural growth with a blend of milk proteins from whey and skim milk sources

Plasma: Improves performance under immune challenge

Balanced supplemental amino acids: Lysine and methionine promote efficient growth and decreased inflammation

Fat: Maintains positive energy balance

Medium-chain fatty acids: Derived from coconut oil to promote high palatability and aroma; provides antimicrobial properties and a quick source of energy

Organic trace minerals: Se, Cu, Zn, Co, Fe, and Mn support growth and muscle development, energy metabolism, and immune function

Enhanced vitamin nutrition: Vitamins A, D, E, and B vitamins stimulate feed intake and growth

Yeast cell wall (MOS): Binds pathogens and stimulates immune function

Direct-fed microbials (DFM): A four-strain blend of *Bacillus* produces digestive enzymes and promotes intestinal microbial balance through inhibition of pathogenic bacteria and reduction of local inflammation

Available with:

DFM-Bovatec®
DFM-Bovatec/ClariFly®
DFM-Neo-Terramycin®
(VFD required)
